Go Dutch

40 pages of the best shipyards and services in the Netherlands

The Netherlands has a long and rich maritime history. For centuries, the Dutch have pioneered this sector and within the modern world of superyachts, they continue to dominate at all levels. Dutch designers, yacht builders, refit yards and all those that support this industry are proud of this heritage

The Netherlands Issue

LEKKER BOATS

The Dutch boat company presents the newest edition of their Damsko: the V7. An all-in-one uncompromising boat that, like its predecessors, combines clean design, brute power, and typical Dutch 'gezelligheid' to the waters. The V7 is Damsko's biggest update thus far, with a brand new underwater body, optimised for comfort and usability. Within seven years LEKKER Boats has sent out 85 custom made Damskos across the world. Thanks to a new underwater body, the V7 bounces 37% less compared to the V6. The boat flows smoothly through the water, even in bends, without compromising on speed or design. With a more spacious and better-isolated engine bay, the boat is now quieter and has space for up to 430 HP. The improved spray rail prevents water from splashing into the boat, which of course is very helpful when racing through the waves at 49 knots through open waters. Interested?

DUTHCRAFT

The DC25 has a modular deck design that allows for fast and easy changes between operational modes such as superyacht tender, dive boat, sport fisher, toy carrier and family cruiser. Combined with a robust and practical hull the DC25 guarantees an 'easy boating' experience for owners, year after year. The DC25's electric drivetrain delivers silent and environmentally-conscious propulsion with excellent range

and speed potential. For a safe and dry trip ashore, the DC25's uniquely designed hinging bow door means worry-free direct access straight onto the beach. The maximum battery capacity is 134kWh, while the continuous power is 100kWh. The boat is able to cruise fast at 32 knots for up to 75 minutes.
